Issue

Using Approval Functionality to Required Fields

Symptom

Cause

Resolution Notes

Hi Michael,

The UDF doesn't have to be visible actually. The system field should be just because the user needs to select the project code. Is not working for you if the UDF is not visible?

Generally regarding copying user preferences you can use the attached script. But note that it will copy every thing

Idit - I am grateful for this. It seems to work nicely as long as those fields are present so the F/S can run. To ensure that it works perfectly and nothing slips through, can you recommend a way to make those fields always visible and active on all users screens?

Thank you again.
